## Amendments to the Specification:

Please amend the paragraph of page 3, lines 10-17 as follows.

Briefly, this object and other objects of the present invention as hereinafter will become more readily apparent can be attained by a process for the continuous manufacture of a mixture of mixture of organosiloxanes of formula I:

$$\frac{[(R'O)zSi(R)(OH)x(O)y]n[(R'O)zSi(R'')(OH)x'(O)y']m}{[(R'O)_zSi(R)(O)_v]_n[(R'O)_zSi(R'')(O)_{v'}]_m}$$

wherein R and R" are identical or different and are methyl, ethyl, vinyl, n-propyl, i-propyl,  $\gamma$ -chloropropyl,n-butyl, t-butyl, n-pentyl, i-pentyl, n-hexyl, i-hexyl, n-heptyl, i-heptyl, n-octyl, i-octyl, hexadecyl, octadecyl or alkoxy, R' represents methyl or ethyl, n and m are identical or different and each is 0 or an integer ranging from 1 to 20, on the condition that (n+m)  $\geq 2$ ,  $\approx 2$  and  $\approx 2$  and  $\approx 3$ , y and y' are  $\approx 3$  to  $\approx 3$ , y and z' are 0 to  $\approx 3$ , wherein  $\approx 3$  and  $\approx 3$  an

Please amend the paragraph bridging page 4, line 26 to page 5, line 12 as follows.

In a preferred embodiment of the continuous process a mixture of organosiloxanes of formula I:

$$\frac{[(R'O)zSi(R)(OH)x(O)y]n[(R'O)zSi(R'')(OH)x'(O)y']m}{[(R'O)_zSi(R)(O)_y]_n[(R'O)_zSi(R'')(O)_{y'}]_m}$$

wherein R and R" groups are identical or different and <u>are mean</u> methyl, ethyl, vinyl, n-propyl, i-propyl, γ-chloropropyl,n-butyl, t-butyl, n-pentyl, i-pentyl, n-hexyl, i-hexyl, n-

heptyl, i-heptyl, n-octyl, i-octyl, hexadecyl, octadecyl or alkoxy, that is, methoxy or ethoxy for example, R' represents methyl or ethyl group or optionally a hydrogen atom, n and m are identical or different and represent a number from 0 to 20, on the condition that  $(n+m) \ge 2$ ,  $x = \frac{1}{2}$  and x' = 0 to x = 0 to 1.5, z and z' are 0 to x = 0, wherein  $x = \frac{1}{2}$  and y' and z and z' are the same or different, and (x + 2y + z) = 3 and (x' + 2y' + z') = 3 ((2y + z) = 3) and (2y' + z') = 3, is prepared by reacting, in a first process stage, (i) an organotrichlorosilane or a mixture of organotrichlorosilanes or a mixture of at least one organotrichlorosilane and tetrachlorosilane, (ii) water and (iii) alcohol combined in a molar ratio (i): (ii):(iii) of 1: (0.59 to 0.95): (0.5 to 100), at a temperature of 0 to 150° C, which produces hydrogen chloride as a product which is removed from the system and the crude organoalkoxysiloxane product is transferred proportionately to the reaction distillation column of a subsequent second stage after an average dwell time of 0.5 to 180 minutes; and
